**Heart disease is the leading cause of death for men and women in the United States.**

Every year, 1 in 4 deaths are caused by heart disease.

**The good news? Heart disease can be prevented and it can start with a HeartSaver CT<sup>SM</sup>.**

The HeartSaver CT Scan is a 64-slice system that supports the whole-body scanning by generating a minimum of 64 slices per second, reconstructing the heart, arteries, and more, in a matter of seconds.

### **Featured Benefits:**

- The HeartSaver CT Scan is the ultimate heart disease risk assessment and only takes about 20-minutes.
- The HeartSaver CT Scan indicates calcium or plaque build-up in the coronary arteries.
- The HeartSaver CT Scan can disclose heart disease, at all stages, making it easier for the physician to treat.
